

Notation tablature

By hexbinmos

The original information was in a video and it's now mostly lost, but Tchus had the images and knew mostly how it worked.

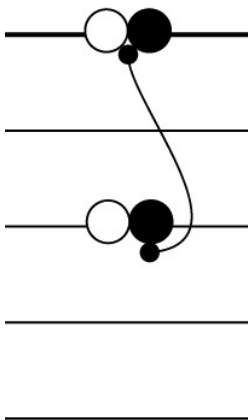

Original FPSB post - <https://thefpsb.1fr1.net/t634-notation-tablature>

I think this might help to get a rough idea

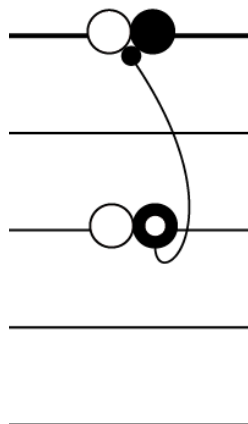

An after that I need to explain contacts

When there's no inside point, it means that we're thinking with the image above

When there's a point inside, it means "under" or "above"

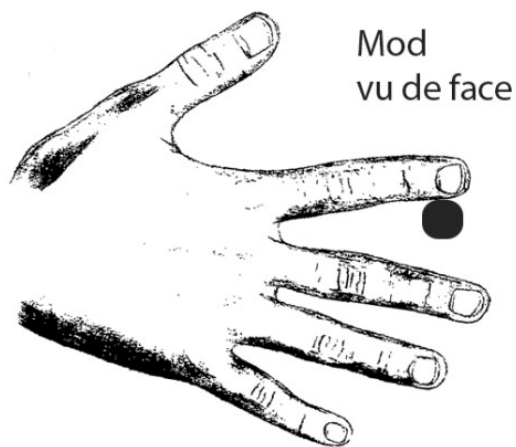

^ Example of "under"

The line going from a straight line to another indicates that both are in contact
Here it means, there's contact under the finger, at the tip of the finger

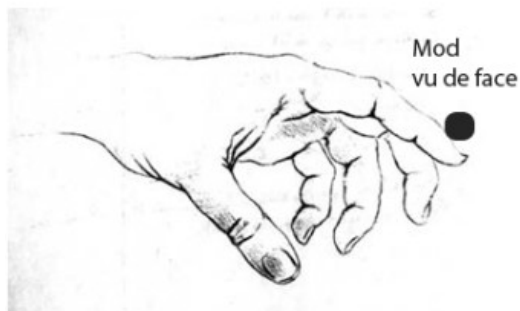

If there isn't any center point, it's either :

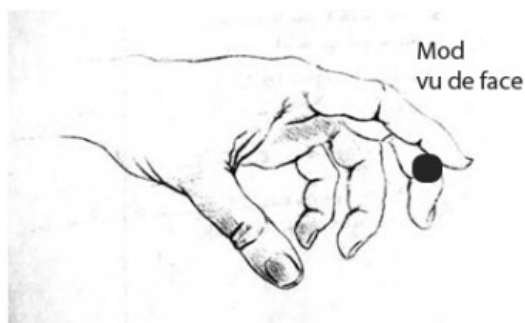

or

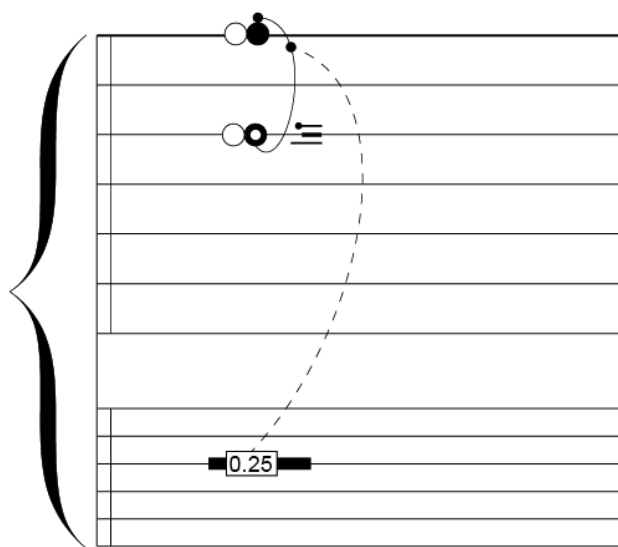

If there's a center point, either :

or

then, bottom lines are here to indicate rotations

Number = how many rotations
(additional lines = phalanx position)

Here, I think it means that there's a 0.25 rotation in the Y axis. Probably a roll under the tip of the index

Rotation lines, from top to bottom

Z axis rotation

X axis rotation

Y axis rotation

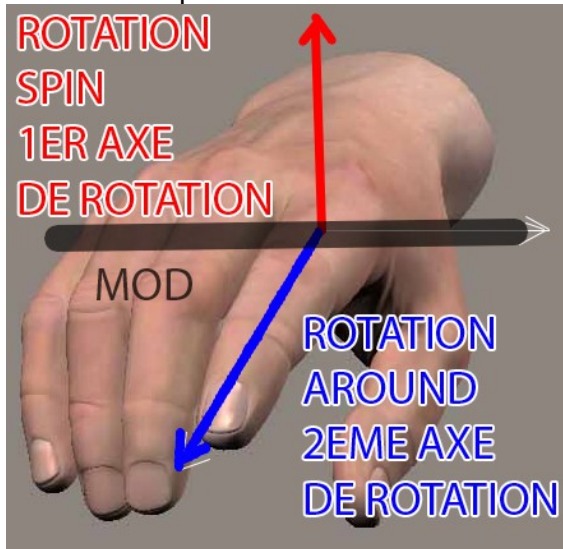

Z axis translation

X axis translation

Y axis translation

(iirc I didn't need all of this but I don't remember why)

I had made a picture

Victor (hex) Jan 29 2021 at 05:20

Yes I did those images when I tried to explain it. Those days I was thinking about doing it again ^^
But I think the main ideas are in those images
